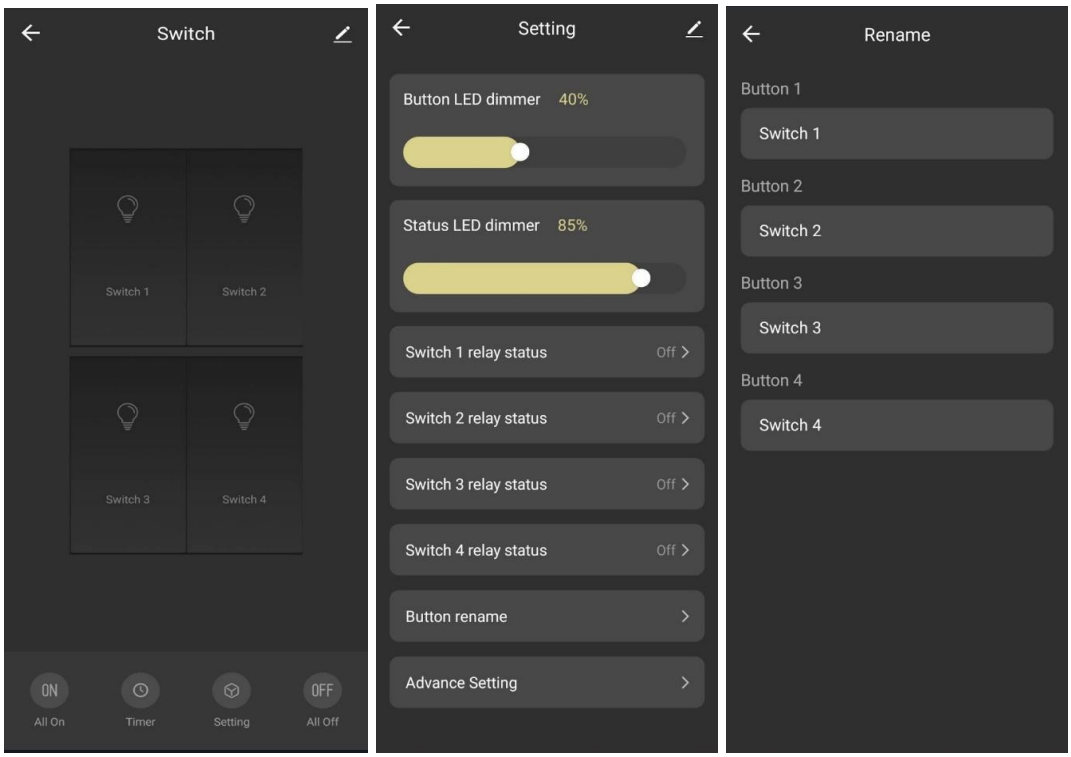
Evolve Switchub APP UI Guide

How to rename APP buttons 1
How to Dim Touch Button LED & the Glass Status LED 2
How to set Multi-Control Association 3
How to set touch button to momentary mode 5
How to Add and Set Switch CMD Values 7

How To Rename App Buttons

1. Setting > Button rename > Type the preferred button name

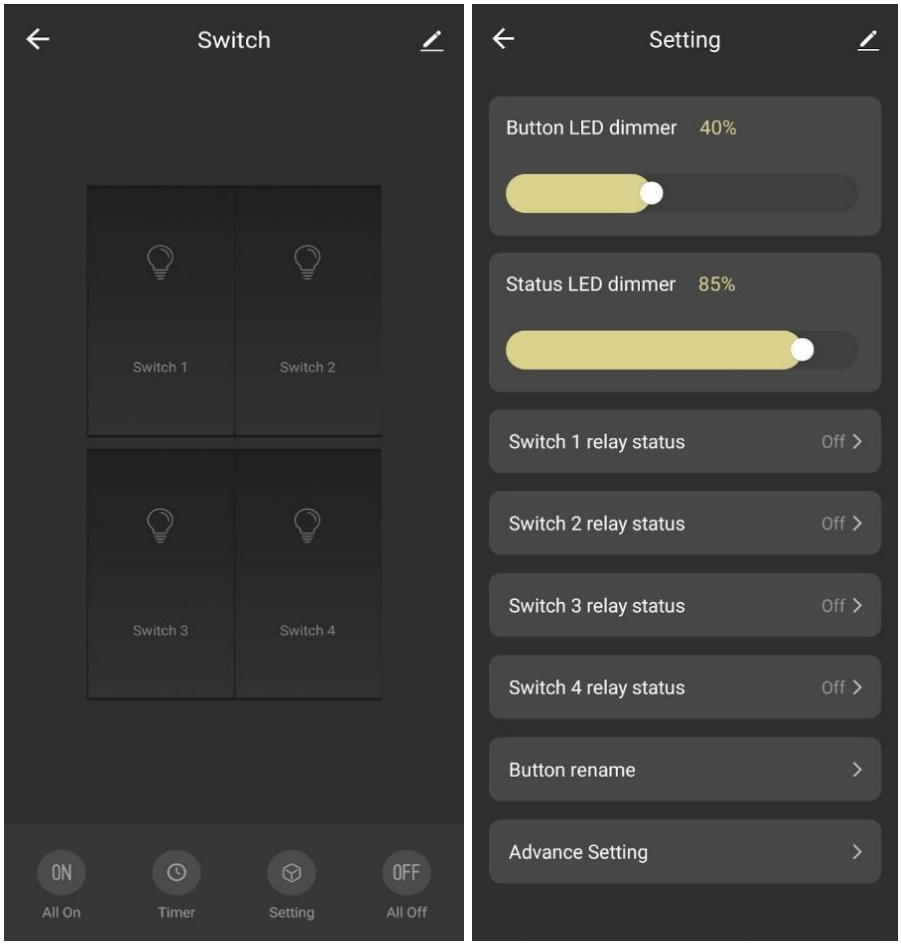
Note: Please always refresh the APP before changing settings to ensure the APP is connected to the internet.



How To Dim Touch Button Led & The Glass Status Led

1. Setting > Slide to adjust dim level 0~100

Note: Please always refresh the APP before changing settings to ensure the APP is connected to the internet.



How To Set Multi-Control Association

Before setting please review possible conflicts in saved automations from user and Advance setting from CMD values, paired S2S Switch to Switch Wired Multi-Button Association.

1. Got to the pencil icon located at the top right corner of the screen
2. Select Multi-Control Association
3. Select the intended button > + Link with Switch > Open the intended Switch > Select the intended button.

How To Set Touch Button To Momentary Mode

Momentary mode changes the operational character of the touch button into a momentary touch switch. This means the button will only turn on if pressed, then off when released.

IMPORTANT NOTICE: This setting is for advanced use cases. Please consult a professional if not sure. Before setting please review possible conflicts in saved automations from user and Advance setting from CMD values, paired S2S Switch to Switch Wired Multi-Button Association.

1. Setting > Advance Setting > Enter Password 001001 > Button mode > Toggle ON (Momentary mode active)

2. To switch back to Normal switch mode, please toggle OFF.

Note: Please always refresh the APP before changing settings to ensure the APP is connected to the internet.
